### 3.2 (b)

#### INDOOR HOUSING FACILITIES.

Sec. 3.2(b) Indoor housing facilities. Ventilation. Indoor housing facilities for dogs and cats must be sufficiently ventilated at all times when dogs or cats are present to provide for their health and well-being, and to minimize odors, drafts, ammonia levels, and moisture condensation. Ventilation must be provided by windows, vents, fans, or air conditioning. Auxiliary ventilation, such as fans, blowers, or air conditioning must be provided when the ambient temperature is 85 [deg]F (29.5 [deg]C) or higher. The relative humidity must be maintained at a level that ensures the health and well-being of the dogs or cats housed therein, in accordance with the directions of the attending veterinarian and generally accepted professional and husbandry practices.

\*The indoor room housing 48 dogs and puppies has a definite ammonia odor present. There is currently no ventilation system being used in this room other than windows. No windows were open at the time of inspection. Ventilation must be provided to minimize odors and ammonia levels. If the windows don't provide adequate ventilation then another method of controlling odors must be installed. This must be done to provide for the health and well being of the dogs in this room.

To be corrected by: 04-21-2010

### 3.11 (b) (2)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control. Sanitization of primary enclosures. Used primary enclosures and food and water receptacles for dogs and cats must be sanitized at least once every 2 weeks using one of the methods prescribed in paragraph (b)(3) of this section, and more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta, and other disease hazards.

## Inspection Report

---

\* The hard surface areas in the main kennel and pens such as walls, floors on the inside portion and the areas on and around the dog doors need to be cleaned and sanitized. There is a buildup of brown grime on the wall surfaces an accumulations of hair, dirt and dog food wastes accumulating on the solid inside flooring along the divider panels and along and under the of the gate fronts and under the feeders. These areas need to be sanitized at least every two weeks to maintain a clean living environment for the 55 dogs being housed in this building. This must also be done to prevent the accumulation of dirt, debris, food wastes and excreta.

To be corrected by: 04-20-2010.

This inspection and exit interview was conducted with the facility owner.

### 2.40 (b) (2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Sec. 2.40 Attending veterinarian and adequate veterinary care (dealers and exhibitors). (b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;

Each dealer shall maintain programs of veterinary care and use appropriate methods to prevent, control and treat diseases.

"From the west pens 1, 2, 3, 4 and 5 on the south side and pens 1, 2, 3 and 4 from the east on the north side, along with 2 pens on the west side have 12 dogs with excessive mats. Also, the mats are going all the way down to the animal's skin. The mats indicate that appropriate methods to prevent and control skin problems or disease is not being maintained as an adequate form of veterinary care. The mats and excessive long hair is in need of grooming.

To be corrected by, 01-Aug-2008.

### 3.6 (a) (2) (x)

#### DIRECT NCI

#### PRIMARY ENCLOSURES.

Sec. 3.6 Primary enclosures. (a) General requirements. (2) Primary enclosures must be constructed and maintained so that they: (x) Have floors that are constructed in a manner that protects the dogs' and cats' feet and legs from injury, and that, if of mesh or slatted construction, do not allow the dogs' and cats' feet to pass through any openings in the floor;

Primary enclosure of flooring must be constructed so it does not allow the dog's feet to pass through any openings in the floor preventing injury or affecting the range of motion for the animals.

## Inspection Report

---

"2 bottom pens middle row in the whelping room mesh wire flooring allows for 12 puppies feet to pass through the openings. A mesh flooring with smaller diameter openings or floor material to put over the large diameter flooring is needed to prevent injury or affect the range of motion of the pups.

To be corrected by, 19-Jul-2008.

### 3.11 (a)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control. (a) Cleaning of primary enclosures. Excreta and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors. When steam or water is used to clean the primary enclosure, whether by hosing, flushing, or other methods, dogs and cats must be removed, unless the enclosure is large enough to ensure the animals would not be harmed, wetted, or distressed in the process. Standing water must be removed from the primary enclosure and animals in other primary enclosures must be protected from being contaminated with water and other wastes during the cleaning. The pans under primary enclosures with grill-type floors and the ground areas under raised runs with mesh or slatted floors must be cleaned as often as necessary to prevent accumulation of feces and food waste and to reduce disease hazards pests, insects and odors.

Fecal matter and food waste should be removed from primary enclosures daily and catch trays or underneath areas as often as necessary to excessive accumulations of feces, reduce disease hazards, insects, pests and odors. "The 2 ground runs, housing 7 animals, along with the catch trays in the whelping room, housing 36 animals, have excessive fecal, food and fluid waste in the catch trays. Also, the catch trays are produced a strong ammonia odor. The mention areas are in need of cleaning to get rid of the fecal, food and fluid waste, which can cause accumulation of feces, disease hazards, insects, attract pest and cause odors.

To be corrected by, 17-Jul-2008.
